Heritage Breeder/Herd: Crossing Kensing, Morefield, Sawyer, Smoke Ridge, Weinheimer

Goats are rotationally grazed and browsed on a mix of native grasses, weeds, and brush. We use FAMACHA when worming and do not adhere to any regular worming schedule. Goats that require repeated worming are not bred. Our goats have access to free choice loose mineral. We will grain nursing dams before turning them out on pasture mid spring. At that point the Dams are expected to "make a living" on what's naturally available. We cull does that do not kid unassisted. Our goats spend the long Michigan winter in open air barns on a diet of grass hay. We provide fresh water, access to natural feed, cover from extreme weather and expect our goats to take care of the rest.
